EDUCATION

- **Indian Institute of Information Technology Nagpur** Nagpur, Maharashtra, India
Bachelor of Technology in Computer Science (Data Science and Analytics) Aug 2023 – Jul 2027
– Academic highlight: 8.98/10 SGPA in 6th semester.
- **St. Xavier's High School** Nagpur, Maharashtra, India
Central Board of Secondary Education (CBSE) 2022
– Class X – 96%

PROJECTS

- **Inter Coach — AI Resume Analyzer & Job Matching Platform** Live — GitHub
React, TypeScript, Node.js, Express, MongoDB, OpenAI, Gemini
 - Built and deployed a full-stack AI resume platform with 21 REST APIs for resume analysis, JD extraction, and resume-JD matching.
 - Engineered deterministic JD matching with a 70/30 weighted must-have vs. nice-to-have scoring model, reducing LLM usage to extraction and recommendations.
 - Integrated OpenAI and Gemini through a unified LLM layer with 3 structured workflows, JSON repair/normalization, and under \$0.20 measured AI cost per resume.
 - Secured 17 protected API routes with JWT access/refresh tokens, rotation, reuse detection, and `sessionVersion`-based session invalidation.
- **Project Camp — Project Management REST API** GitHub
Node.js, Express, MongoDB, Mongoose, JWT, RBAC
 - Developed a 34-route project management REST API supporting projects, members, tasks, subtasks, notes, and file attachments.
 - Designed role-based authorization across 26 protected routes with 3 permission levels, enforcing distinct access patterns across project workflows.
 - Optimized relational reads through 3 MongoDB aggregation pipelines for live member counts, project members, and nested task/subtask data beyond standard CRUD.
 - Secured authentication with JWT access/refresh tokens and rotation, alongside 2 time-bound account-recovery flows using SHA-256-hashed tokens with 20-minute expiry.
- **TCP Server in JS** GitHub
Node.js, TCP/IP, HTTP/1.1
 - Implemented an HTTP/1.1 server framework in Node.js using raw TCP sockets (`net`), building request parsing, routing, middleware chaining, and response handling without relying on Node's built-in `http` module.
 - Engineered TCP stream buffering and HTTP request framing to correctly handle partial reads, `Content-Length`-delimited bodies, and pipelined requests split across arbitrary socket chunks.
 - Sustained ~4,800 requests/sec at 50 concurrent connections with 0 errors in local load testing; diagnosed and fixed a socket-lifecycle bug that previously capped throughput.
 - Achieved 79% line coverage across 20 automated tests, including 100% coverage of core framing and routing modules, with each layer tested independently of live sockets.

SKILLS

- Programming Languages: C++, JavaScript, Python
- Core Computer Science: Data Structures & Algorithms, Object-Oriented Programming, Time & Space Complexity
- Backend: Node.js, Express, MongoDB, Mongoose, Flask, FastAPI, SQL
- Frontend: React, TypeScript, Vite, Tailwind CSS
- AI Integration: OpenAI API, Google Gemini API, LLM-based text analysis, structured JSON processing
- Tools: Git, GitHub, Docker, Postman, GitHub Actions, Vercel, Render

ACHIEVEMENTS

- Solved 300+ LeetCode problems covering trees, graphs, recursion, dynamic programming, and core algorithmic patterns.
- Published 40+ technical videos on Data Structures & Algorithms and programming concepts on YouTube.
